PROFESSIONAL SUMMARY

Experienced **Cloud and Platform Engineer** with over **10 years of hands-on experience** designing and delivering scalable, secure, and cost-efficient solutions across **AWS, Azure, and Google Cloud**. Specializes in **Kubernetes, GitHub Actions, Terraform, and DevOps automation**, with a strong focus on developer enablement, infrastructure security, and CI/CD optimization.

Currently working as a **Technical Architect at Infinite Computer Solutions**, leading platform engineering initiatives for enterprise clients — including the design of **Kubernetes-based GitHub Actions runners** that reduced CI/CD infrastructure costs by **80%**. Championing **GitOps practices**, centralized IAM tooling, and RBAC hardening to secure multi-tenant Kubernetes environments.

Previously at **Turbot**, contributed to the open-source project **Steampipe**, developing Terraform providers, multi-cloud plugins, and compliance guardrails across AWS, Azure, and GCP. Architected integrations for **AWS GovCloud, Azure US Government**, and other specialized cloud services.

Passionate about building reliable cloud platforms, improving developer productivity, and delivering automation that balances innovation with operational stability.

Core Competencies

Cloud Platforms: AWS (certified), Azure, GCP

DevOps & Automation: Kubernetes (EKS), Docker, GitHub Actions, Terraform, FluxCD, Helm, CI/CD Pipelines

Languages & Tools: Go, JavaScript, Python, Bash

Security & Governance: IAM, RBAC, Guardrails, CIS compliance, Observability (Prometheus, Grafana)

Practices: GitOps, Infrastructure as Code (IaC), platform engineering, developer enablement

Professional Experience

• Technical Architect

Dec 2022 – present

Infinite Computer Solutions, Gurugram

Client: Thermofisher Scientific

Role: Platform Engineer

- Designed and implemented an Internal Developer Platform (IDP) to consolidate and streamline services from multiple product teams, improving discoverability and re-usability across the organization.
- Deployed a usage-based billing solution within the IDP to track and charge different divisions for consumption of self-hosted GitHub Actions, optimizing resource allocation and promoting accountability.
- Implemented and deployed front-end application for hosting the platform engineering documents using [docusaurus](#).
- Implemented and deployed front-end application for collecting services information into the internal portal for easier co-ordination between product and the platform engineering team.
- Implemented and manage scalable self-hosted GitHub Actions runner infrastructure using Kubernetes for efficient CI/CD workflows. This helped to reduce the infrastructure cost for CI/CD tools by nearly 80%.
- Implemented and manage reusable GitHub Actions to allow teams to build and deploy different types of applications like Kubernetes deployments (Maven, Node and Gradle), K8S Helm deployments, AWS S3, AWS EC2, Kubernetes Serverless, etc...
- Helped team migrate CI/CD pipelines to GitHub actions workflows.
- Automated the k8s add-on deployments with flux using [GitOps](#) methodology.
- Enforced least privilege by centralizing IAM access management for deployment accounts through a custom-developed tool. This prevented cross-team access misuse and improved overall security posture.

- Secured Kubernetes infrastructure by implementing granular RBAC controls across namespaces, preventing unauthorized access and modifications to deployed micro-services.

- **Senior Software Engineer**

Turbot , Kolkata

Feb 2018 – Nov 2022

STEAMPIPE - OPEN SOURCE

- Implemented **terraform provider** for Steampipe Cloud.
- Worked as plugin developer for Steampipe.
- Implemented plugins for cloud providers and SAAS applications like **AWS**, **Azure**, **GCP**, **AliCloud**, **OCI**, **Salesforce**, **Kubernetes**, **Snowflake** and **Jira**.
- Implemented CIS compliance mods for **AWS** and **Azure**.
- Automated integration testing for plugins using Terraform and JavaScript.

TURBOT-V5

- Designed and developed **mods** for AWS, Azure and GCP services using JavaScript.
- Developed cloud governance guardrails for AWS services (IAM, EC2, VPC, S3, Inspector, GuardDuty, CloudFormation, CloudWatch and CloudTrail). Also, developed guardrails for Azure and GCP services.
- Architected and implemented **AWS US Government** and **Azure US Government** clouds integration into product.
- Integrated Azure Directory and Tenant into product for easier importing of Subscriptions.
- Architected the integration of **AWS Inspector** service, which helped Turbot become a featured partner of **Inspector**.
- Implemented **AWS Outposts** mod, which helped Turbot become a Technology product partner of **Outposts**.

- **Systems Engineer**

TCS , Hyderabad

Sep 2015 – Jan 2018

ECONOMIC CAPITAL MODELING

- Developed ETL jobs in IBM DataStage to automate the loading of modelling dimension tables.
- Developed scheduled workflows in BMC Control-M for scheduling the jobs.
- Prepared high level design document for the components of the ETL jobs.

SDIS PALAMIDA MIGRATION

- Implemented migration of data from SharePoint to Palamida using Java.
- Used Apache POI framework and Rest APIs for programming.

HIGHLIGHTED PROJECTS

- **Steampipe (Open Source)**: Contributed Terraform provider and 10+ multi-cloud plugins that enable reporting on compliance using SQL.
- **Internal Developer Platform**: Architected Kubernetes-based IDP for Thermo Fisher, consolidating 20+ microservices with GitOps and RBAC controls.

Certifications

- **AWS Certified Solutions Architect – Associate**

<https://www.credly.com/badges/cd161d44-dbd7-4999-b3ed-f56fbc1deeb7>

Education

- **Bachelor Of Technology In Computer Science & Engineering**

FET, GKV , Uttarakhand

Jul 2011 – Jun 2015

Technical Skills: Cloud: AWS, Azure, GCP | DevOps: Kubernetes, Docker, GitHub Actions, Terraform | Languages: Go, JavaScript, Python
